

Table of contents – vol. 2

SYMBOLS LIST

III FUNCTIONS AND SPECIFICATIONS:

INTRODUCTION TO PART THREE:

17 TRANSPORTATION STATISTICS:

- 17.1 Traffic volume;
- 17.2 Operating fleet;
- 17.3 Social impact;

18 VEHICLE FUNCTIONS:

- 18.1 Systemdesign;
- 18.2 Objective requirements;
- 18.3 Subjective requirements;
- 18.4 Aging resistance;

19 REGULATIONS:

- 19.1 Vehicle system;
- 19.2 Wheels
- 19.3 Steering system;
- 19.4 Braking system;
- 19.5 Structures;
- 19.6 Gearbox;

IV THE CHASSIS AS A PART OF THE VEHICLE SYSTEM:

INTRODUCTION TO PART FOUR:

20 GENERAL CHARACTERISTICS:

- 20.1 Symmetry considerations;
- 20.2 Reference frames;
- 20.3 Position of the center of mass;
- 20.4 Mass distribution among the various bodies;
- 20.5 Moments of inertia;

21 AN OVERVIEW ON MOTOR VEHICLE AERODYNAMICS:

- 21.1 Aerodynamic forces andmoments
- 21.2 Aerodynamic field around a vehicle;
- 21.3 Aerodynamic drag
- 21.4 Lift and pitching moment;
- 21.5 Side force and roll and yawmoments;
- 21.6 Experimental study of aerodynamic forces;
- 21.7 Numerical aerodynamics;

22 PRIME MOVERS FOR MOTOR VEHICLES:

- 22.1 Vehicular engines
- 22.2 Internal combustion engines ;
- 22.3 Electric vehicles;
- 22.4 Hybrid vehicles;

23 DRIVING DYNAMIC PERFORMANCE:

- 23.1 Load distribution on the ground;
- 23.2 Total resistance to motion;
- 23.3 Power needed for motion;
- 23.4 Available power at the wheels;
- 23.5 Maximum power that can be transferred to the road;
- 23.6 Maximum speed;
- 23.7 Gradeability and initial choice of the transmission ratios;
- 23.8 Fuel consumption at constant speed;
- 23.9 Vehicle take-off from rest;
- 23.10 Acceleration;
- 23.11 Fuel consumption in actual driving conditions;

24 BRAKING DYNAMIC PERFORMANCE:

- 24.1 Braking in ideal conditions;
- 24.2 Braking in actual conditions;
- 24.3 Braking power;

25 HANDLING PERFORMANCE:

- 25.1 Low-speed or kinematic steering;
- 25.2 Ideal steering;
- 25.3 High-speed cornering: simplified approach;
- 25.4 Definition of understeer and oversteer
- 25.5 High-speed cornering;
- 25.6 Steady-state lateral behavior;
- 25.7 Neutral-steer point and static margin;
- 25.8 Response to external forces and moments;
- 25.9 Slip steering;
- 25.10 Influence of longitudinal forces on handling;
- 25.11 Transversal load shift;
- 25.12 Toe-in;
- 25.13 Effect of the elasto-kinematic behavior of suspensions and of the compliance of the chassis;
- 25.14 Stability of the vehicle;
- 25.15 Unstationary motion;
- 25.16 Vehicles with two steering axles (4WS);
- 25.17 Articulated vehicles;
- 25.18 Multibody articulated vehicles;
- 25.19 Limits of linearized models;

26 COMFORT PERFORMANCE:

- 26.1 Internal excitation;
- 26.2 Road excitation;
- 26.3 Effects of vibration on the human body;
- 26.4 Quarter-car models;
- 26.5 Heave and pitch motion;
- 26.6 Roll motion;
- 26.7 Effect of nonlinearities;
- 26.8 Concluding remarks on ride comfort;

27 CONTROL OF THE CHASSIS AND 'BY WIRE' SYSTEMS:

- 27.1 Motor vehicle control;
- 27.2 Models for the vehicle-driver system;
- 27.3 Antilock (ABS) and antispin (ASR) systems;
- 27.4 Handling control;
- 27.5 Suspensions control;
- 27.6 By wire systems;

V MATHEMATICAL MODELLING:**INTRODUCTION TO PART FIVE:****28 MATHEMATICAL MODELS FOR THE VEHICLE:**

- 28.1 Mathematical models for design;
- 28.2 Continuous and discretized models;
- 28.3 Analytical and numerical models;

29 MULTIBODY MODELLING:

- 29.1 Isolated vehicle;
- 29.2 Linearized model for the isolated vehicle;
- 29.3 Model with 10 degrees of freedom with locked controls;
- 29.4 Models of deformable vehicles;
- 29.5 Articulated vehicles;
- 29.6 Gyroscopic moments and other second order effects;

30 TRANSMISSION MODELS:

- 30.1 Coupling between comfort and drive line vibration;
- 30.2 Dynamic model of the engine
- 30.3 Drive line;
- 30.4 Inertia of the vehicle;
- 30.5 Linearized drive line model;
- 30.6 Non-time-invariant models;
- 30.7 Multibody drive line models;

31 MODELS FOR TILTING BODY VEHICLES:

- 31.1 Suspensions for high roll angles;
- 31.2 Linearized rigid body model;
- 31.3 Dynamic tilting control;
- 31.4 Handling-comfort coupling;

A EQUATIONS OF MOTION:

- A.1 Equations of motion of discrete linear systems;
- A.2 Stability of linear dynamic systems;
- A.3 Closed-form solution of the forced response;
- A.4 Nonlinear dynamic systems;
 - A.5 Lagrange equations in the configuration and state space;
- A.6 Hamilton equations and phase space;
- A.7 Lagrange equations in terms of pseudo-coordinates;
- A.8 Motion of a rigid body;

B DYNAMICS OF MOTORCYCLES:

- B.1 Basic definitions;
- B.2 Locked controls model;
- B.3 Locked controls stability;
- B.4 Steady-state motion;
- B.5 Free controls model;
- B.6 Stability at large roll angles;

C VEHICLES FOR EXTRATERRESTRIAL ENVIRONMENT:

- C.1 The Lunar Roving Vehicle (LRV) of the Apollo missions;
- C.2 Types of missions;
- C.3 Environmental conditions;
- C.4 Mobility;
- C.5 Behavior of vehicles in low gravity ;
- C.6 Power system;
- C.7 Conclusions;

D PROBLEMS RELATED TO ROAD ACCIDENTS:

- D.1 Vehicle collision: Impulsive model;
- D.2 Vehicle collision: Second approximation model;
- D.3 Motion after collision;
- D.4 Rollover;
- D.5 Motion of transported objects during impact;

E DATA ON VARIOUS VEHICLES:

- E.1 Small car (a);
- E.2 Small car (b);
- E.3 Small car (c);
- E.4 Medium size saloon car (a);
- E.5 Medium size saloon car (b);
- E.6 Sports car (a);
- E.7 Sports car (b);
- E.8 Van;
- E.9 Heavy articulated truck;
- E.10 Racing motorcycle;
